12D1M series meet reinforced insulation requirements.

They are specially designed for applications where require compact size, high isolation, low isolation capacitor and low leakage current power.

They are widely used in medical, electricity, IGBT driver and so on.

They are suitable for:

1. Where the voltage of the input power supply is stable  
(Voltage variation:  $\pm 10\%$  Vin)
2. Where isolation is necessary between input and output (isolation voltage  $\leq 4200\text{VAC}$  or  $6000\text{VDC}$ )
3. Where do not has high requirement of line regulation and the ripple & noise of the output voltage  
Such as: Medical collection and isolation, High voltage collection circuit, IGBT-driven circuits, etc.

**Specifications typical at TA=25°C, nominal input voltage and rated output current unless otherwise specified**
